To Whom It May Concern,

I am writing with great enthusiasm to express my interest in the Junior Model Based Systems Engineering position available with Sonalysts. After reviewing the job description on your website, I am confident that my background and skills align with your team's needs.

I would like to take a moment to address the gap in my professional computer science history. I left my last developer job to improve some health issues. I have decided it's time for me to continue my career path as a software developer. I have been staying in practice with daily LeetCode examples and more importantly, personal projects.

In my previous positions, I have gained extensive experience that directly relates to the responsibilities outlined in your job description. I have successfully used agile methodology with a team of developers and business analysts to produce refined software. Python, specifically the Panda and Numpy libraries, were my primary tools to parse out and standardize large amounts of data. On top of that, I also have experience using Javascript and Puppeteer to collaborate on a web scraper to gather data from competitors. I know my skills will make me a valuable asset to your team.

As a dedicated team player, I am committed to going above and beyond to ensure tasks are completed efficiently. My problem-solving skills and proactive approach have allowed me to make a positive impact in my work environment. I look forward to the opportunity to discuss how my experience and skills align with your needs. Thank you for considering my application. I hope to speak with you soon.

Sincerely,

Brett Fowler
